

# Job Description: QA Automation Engineer

## Overview

- We are looking for a QA Automation Engineer to ensure software quality through automated testing.

## Key Responsibilities

- Design and maintain automated test scripts.
- Execute functional, regression, and performance tests.
- Identify, report, and track defects.
- Collaborate closely with development teams.

## Required Technical Skills

- Experience with Selenium or similar automation tools.
- Knowledge of Java or Python for test automation.
- Understanding of SDLC and STLC.
- Familiarity with CI/CD pipelines.

## Professional Experience

- 1–3 years of QA or automation testing experience.
- Hands-on experience with web application testing.

## Soft Skills

- Strong analytical mindset.
- Attention to detail.
- Clear communication skills.
